

Postman Testing Guide — Loan Applications Export API

Endpoint Overview

Field	Value
Method	GET
Full URL	https://lionfish-app-mg3te.ondigitalocean.app/api/loans/export

Step-by-Step Postman Setup

Step 1 — Create a New Request

- 1. Open Postman → click **"New"** → select **"HTTP Request"**
- 2. Set the method dropdown to GET
- 3. Paste the URL in the address bar:

```
https://lionfish-app-mg3te.ondigitalocean.app/api/loans/export
```

Step 2 — Headers Tab

Click the **Headers** tab and add the following rows:

KEY	VALUE
Authorization	Key paromita\$432
Content-Type	application/json

 **Important:** The **Authorization** value must be exactly **Key paromita\$432** — note the word **Key** (capital K) followed by a **space**, then the secret. Do **NOT** use **Bearer** here.

Step 3 — Params Tab

Click the **Params** tab and add these two query parameters:

KEY	VALUE	DESCRIPTION
from	2026-01-01T00:00:00.000Z	Start of date range (ISO 8601 UTC)
to	2026-04-08T23:59:59.999Z	End of date range (ISO 8601 UTC)

Postman will automatically append these to the URL, making it:

```
https://lionfish-app-mg3te.ondigitalocean.app/api/loans/export?from=2026-01-01T00%3A00%3A00.000Z&to=2026-04-08T23%3A59%3A59.999Z
```

Step 4 — Body Tab

No body is needed. Leave it as **None**.

Step 5 — Send the Request

Click the blue **Send** button and check the response below.

Date Format Reference

The **from** and **to** params must be in **ISO 8601 UTC format**:

```
YYYY-MM-DDTHH:mm:ss.sssZ
```

Common Date Range Examples

Range	from	to
Last 7 days	2026-04-01T00:00:00.000Z	2026-04-08T23:59:59.999Z
Last 30 days	2026-03-09T00:00:00.000Z	2026-04-08T23:59:59.999Z
Last 90 days	2026-01-08T00:00:00.000Z	2026-04-08T23:59:59.999Z
Full year 2026	2026-01-01T00:00:00.000Z	2026-12-31T23:59:59.999Z
All time	2020-01-01T00:00:00.000Z	2026-12-31T23:59:59.999Z

Complete Request at a Glance

```
Method : GET
URL    : https://lionfish-app-mg3te.ondigitalocean.app/api/loans/export

Headers:
  Authorization : Key paromita$432
  Content-Type  : application/json

Params:
  from : 2026-01-01T00:00:00.000Z
  to   : 2026-04-08T23:59:59.999Z
```

Expected Responses

☑ Success — 200 OK

```
{
  "success": true,
  "count": 42,
  "data": [
    {
      "id": "clxxx...",
      "name": "Ravi Kumar",
      "mobileNo": "9876543210",
      "personalEmail": "ravi@example.com",
      "panNo": "ABCDE1234F",
      "aadhaarNo": "123456789012",
      "loanAmount": 150000,
      "loanPurpose": "Home renovation",
      "loanPeriod": 24,
      "status": "PENDING",
      "incomeType": "SALARIED",
      "monthlyIncome": 45000,
      "state": "Odisha",
      "district": "Bhubaneswar",
      "applicationNumber": "LIN-2026-00042",
      "createdAt": "2026-03-15T10:22:00.000Z",
      "updatedAt": "2026-03-15T10:22:00.000Z"
    }
  ],
  "elapsed": null
}
```

✗ Unauthorized — 401 / 403

```
{
  "success": false,
  "error": "Unauthorized"
}
```

Fix: Check that the `Authorization` header is exactly `Key paromita$432` (capital K, space after Key).

✗ Missing Params — 400 Bad Request

```
{
  "error": "Both \"from\" and \"to\" query params are required."
}
```

Fix: Make sure both **from** and **to** are filled in the **Params** tab.

✖ Server Unreachable — 503

```
{
  "success": false,
  "error": "connect ECONNREFUSED"
}
```

Fix: The production server may be down. Try again after some time.

Testing via cURL (Alternative)

If you prefer the terminal over Postman, run this command:

```
curl -X GET \
  "https://lionfish-app-mg3te.ondigitalocean.app/api/loans/export?from=2026-01-01T00:00:00.000Z&to=2026-04-08T23:59:59.999Z" \
  -H "Authorization: Key paromita$432" \
  -H "Content-Type: application/json"
```

Notes

- The **Authorization** scheme used here is a **custom Key** scheme, not the standard **Bearer** token scheme.
- Dates must always be in **UTC** (ending in **Z**) — local time formats will not work correctly.
- The API returns all loan applications created between **from** and **to**, sorted by creation date descending.
- The **data** array may be empty (**[]**) if no applications exist in the given date range — this is not an error.

Postman Testing Guide — Update Loan Status API (LOS System)

Endpoint Overview

Field	Value
Method	PUT

Field	Value
Full URL	https://lionfish-app-mg3te.ondigitalocean.app/api/loans/update-status

Step-by-Step Postman Setup

Step 1 — Create a New Request

1. Open Postman → click **"New"** → select **"HTTP Request"**
2. Set the method dropdown to **PUT**
3. Paste the URL:

```
https://lionfish-app-mg3te.ondigitalocean.app/api/loans/update-status
```

Step 2 — Headers Tab

Add the exactly same headers required for the GET API:

KEY	VALUE
Authorization	Key paromita\$432
Content-Type	application/json

Step 3 — Body Tab

1. Click the **Body** tab.
2. Select **raw**.
3. In the dropdown to the right, verify it says **JSON**.
4. Paste the following payload structure into the box:

```
{
  "id": "123",                // Required: The ID sent down in the export API
  "status": "APPROVED",       // Required: Needs to be a valid status e.g.
  // APPROVED or REJECTED
  "employeeId": "EMP-042",    // Optional
  "employeeName": "Rahul Verma", // Optional
  "reason": "Credit score met", // Optional: Must provide reason if REJECTED
  "loanNo": "LA-992348",      // Optional
  "applicationNumber": "APP-584" // Optional
}
```

 **Note about id:** The **id** you pass back MUST match the **id** field sent to you in the **GET /api/loans/export** request for that specific application.

 **Note about Aadhaar Number:** The LOS team requested the Aadhaar Number. It is **already available** to you in the **GET /api/loans/export** payload under the **aadhaarNo** key.

Step 4 — Send

Click the blue **Send** button.

Expected Responses

☒ Success — 200 OK

```
{
  "success": true,
  "message": "Loan application updated successfully from LOS.",
  "data": {
    "applicationId": 123,
    "status": "APPROVED",
    "loanAccountNumber": "LA-992348"
  }
}
```

☒ Application Not Found — 400 Bad Request

```
{
  "success": false,
  "message": "Loan Application not found for id: 999"
}
```

☒ Missing Data — 400 Bad Request

```
{
  "success": false,
  "message": "Both \"id\" and \"status\" are required in the request body."
}
```
